The **Ideal Pair Method**, an Alternative to the **Ideal Profile Method** Based on **Pairwise Comparisons**

Sébastien Lê - Margot Brard

Organised by:

The Ideal Profile Method : a quick reminder

- 3 pieces of information are collected from (usually) a consumer panel, amongst which 2 are “classical”, a third one very original
 - Sensory profile
 - Hedonic data
 - A description of their ideal, each time consumers taste a product
(very important to assess the reliability of the data)

The Ideal Profile Method : the data set and its structure

| Product | Subject | Desc. 1 | Desc. 1 Ideal | ... | Desc. K | Desc. K Ideal | Liking |
|---------|---------|---------|---------------|-----|---------|---------------|--------|
| 1 | 1 | | | | | | |
| 2 | 1 | | | | | | |
| ... | 1 | | | | | | |
| N | 1 | | | | | | |
| 1 | 2 | | | | | | |
| ... | 2 | | | | | | |
| N | 2 | | | | | | |

Our motivation

- To adapt the Ideal Profil Method to make it accessible for **children**

How can we ask children to describe products and in particular an imaginary product such as their ideal product ?

Our motivation

- To adapt the Ideal Profil Method to make it accessible for **children**

How can we ask children to describe products and in particular an imaginary product such as their ideal product ?

How can we be sure that they understand the concept of ideal product ?

Our solution: the ideal pair method

Our experience

- 105 children ranging from 5 to 11 years old
- Complex products : 7 fragrances (perfumes for kids) + the **ideal product** (materialized with an empty brown flask)

- 8 olfactory & sensory descriptors

How can we ask children to describe products and in particular an imaginary product such as their ideal product ?

The pairs...

The pairs...

A gamification based on cooperation

A gamification based on cooperation

- 8 sensory descriptors represented by cards
- 5 pairs per kid
- 2 red/green stickers
- 1 hedonic stair to climb

A Bradley-Terry model for each descriptor...

| | Descriptor 1 | ... | Descriptor M |
|-----------|--------------|--------------|--------------|
| Product 1 | | | |
| Product i | | ability of i | |
| Product l | | | |

**Quantitative
data**

...to get a sensory profile of the products

How can we be sure that they understand the concept of ideal product ?

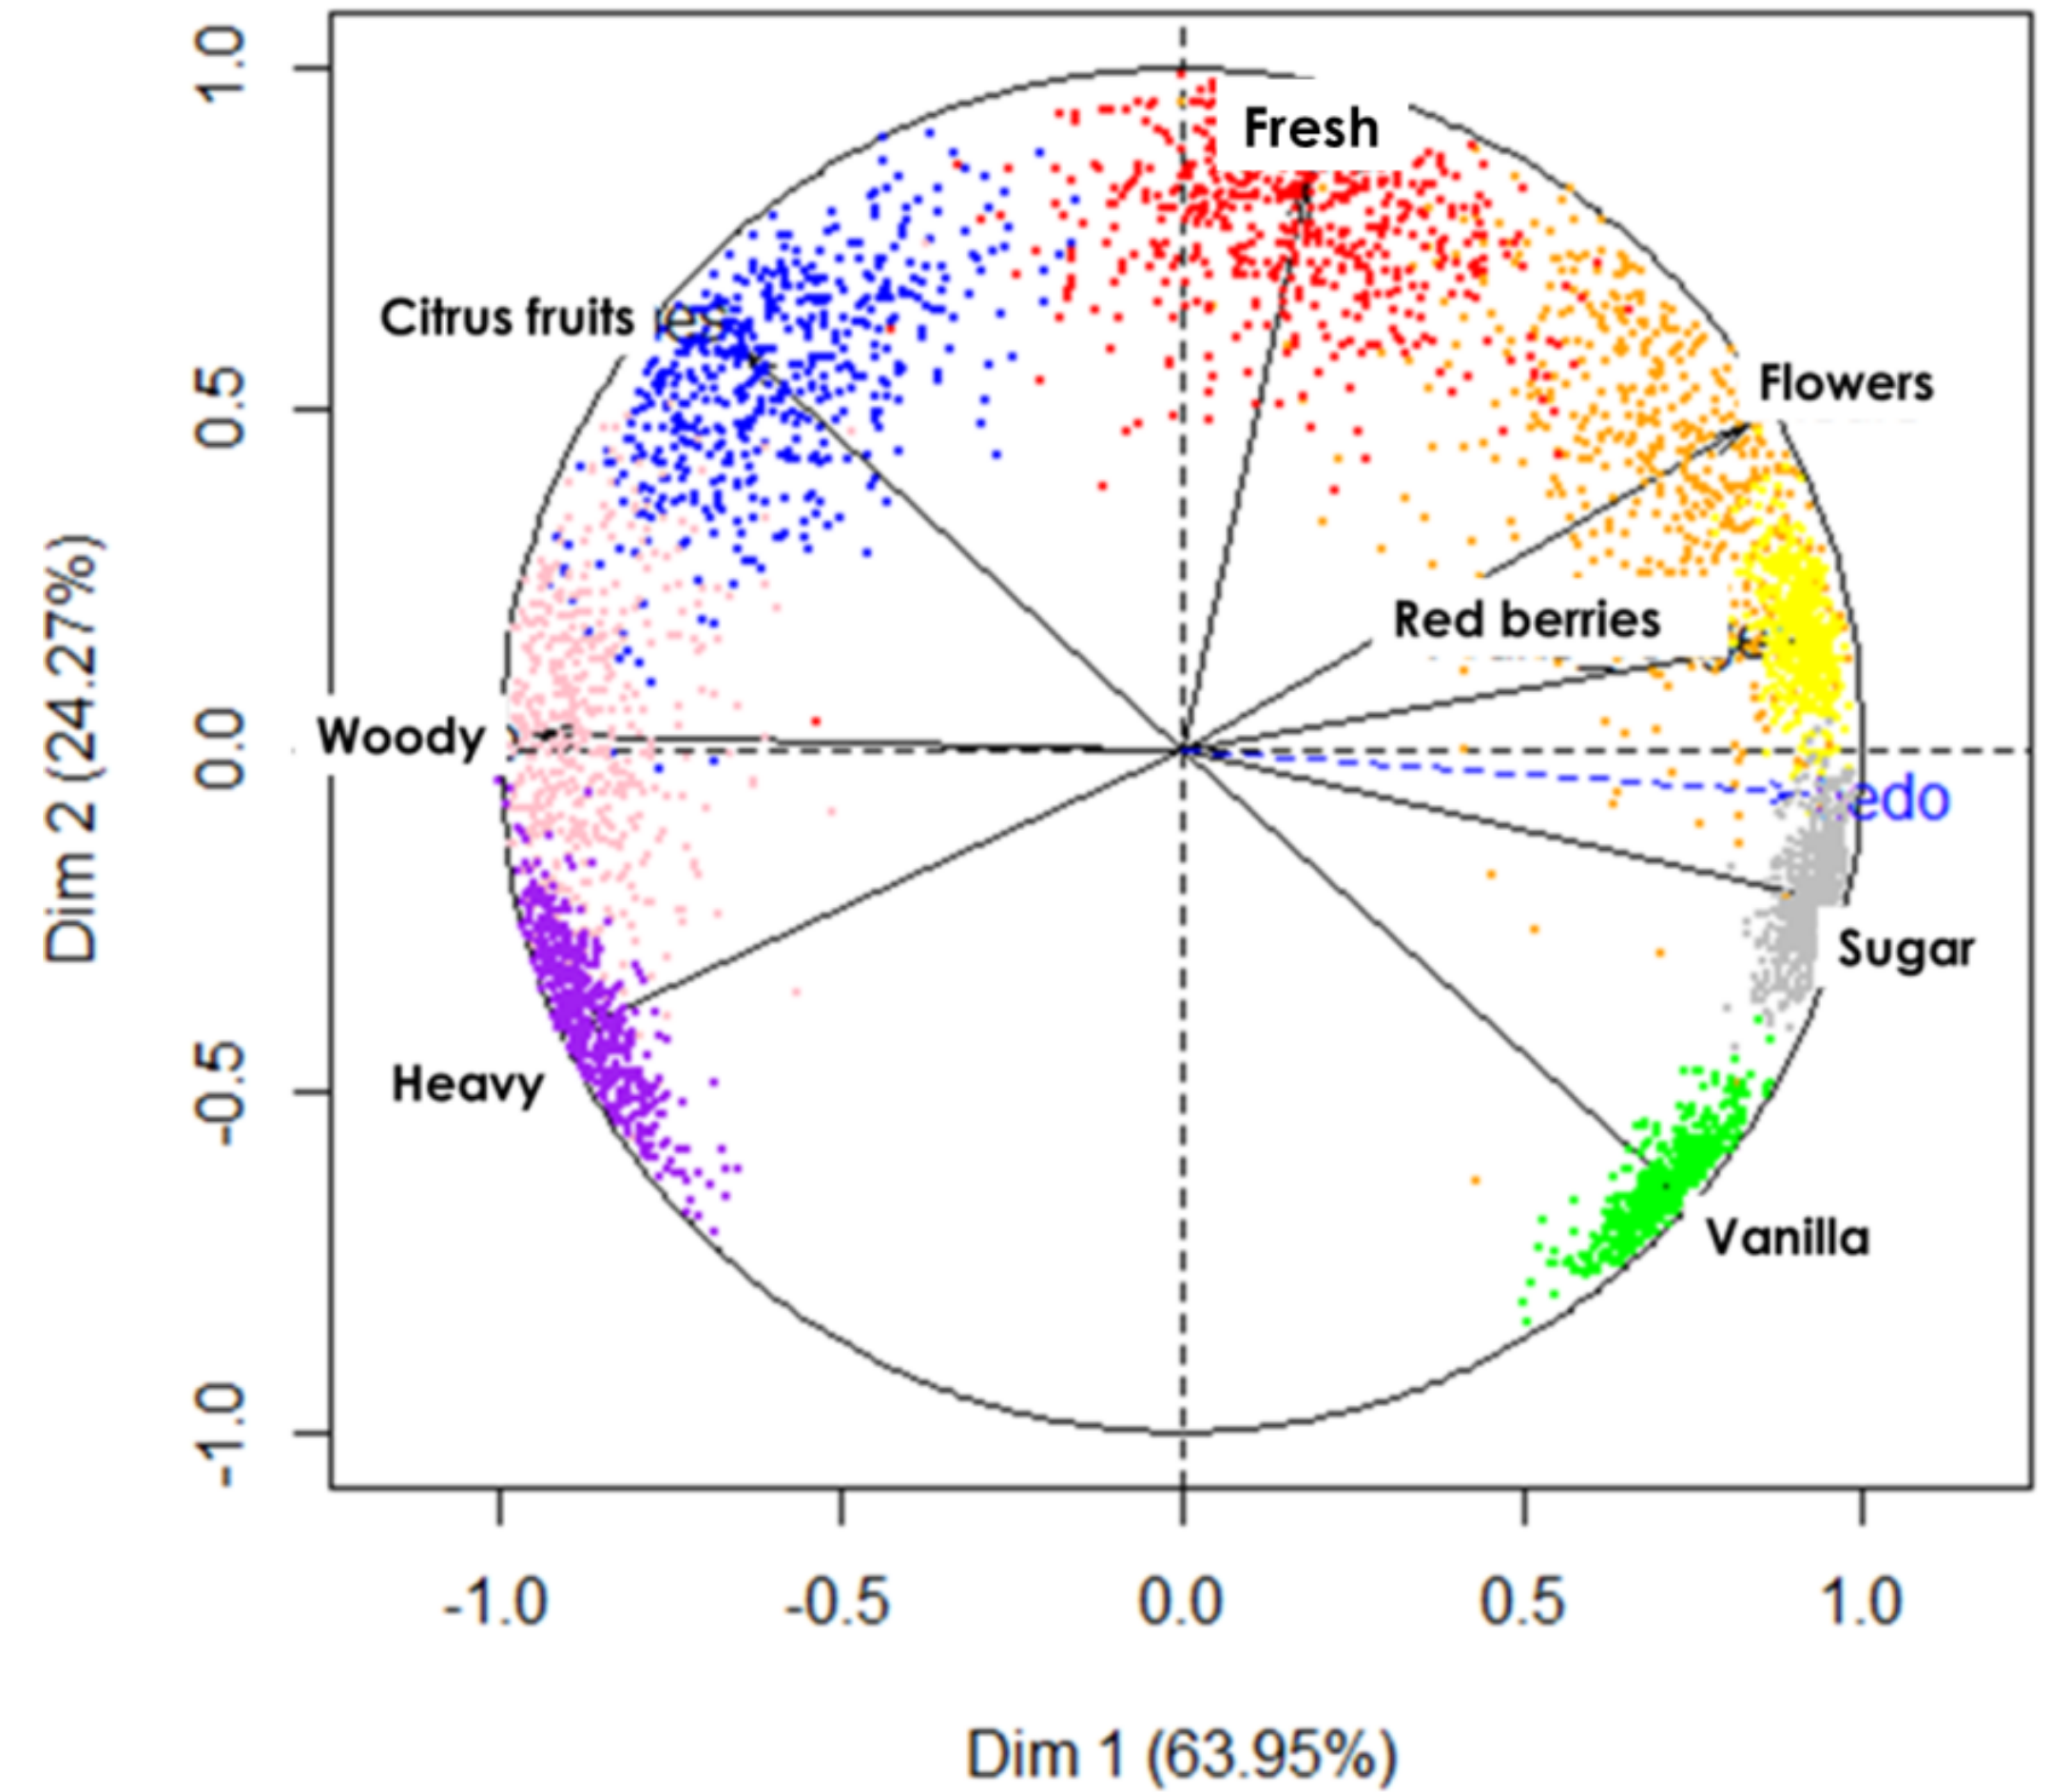

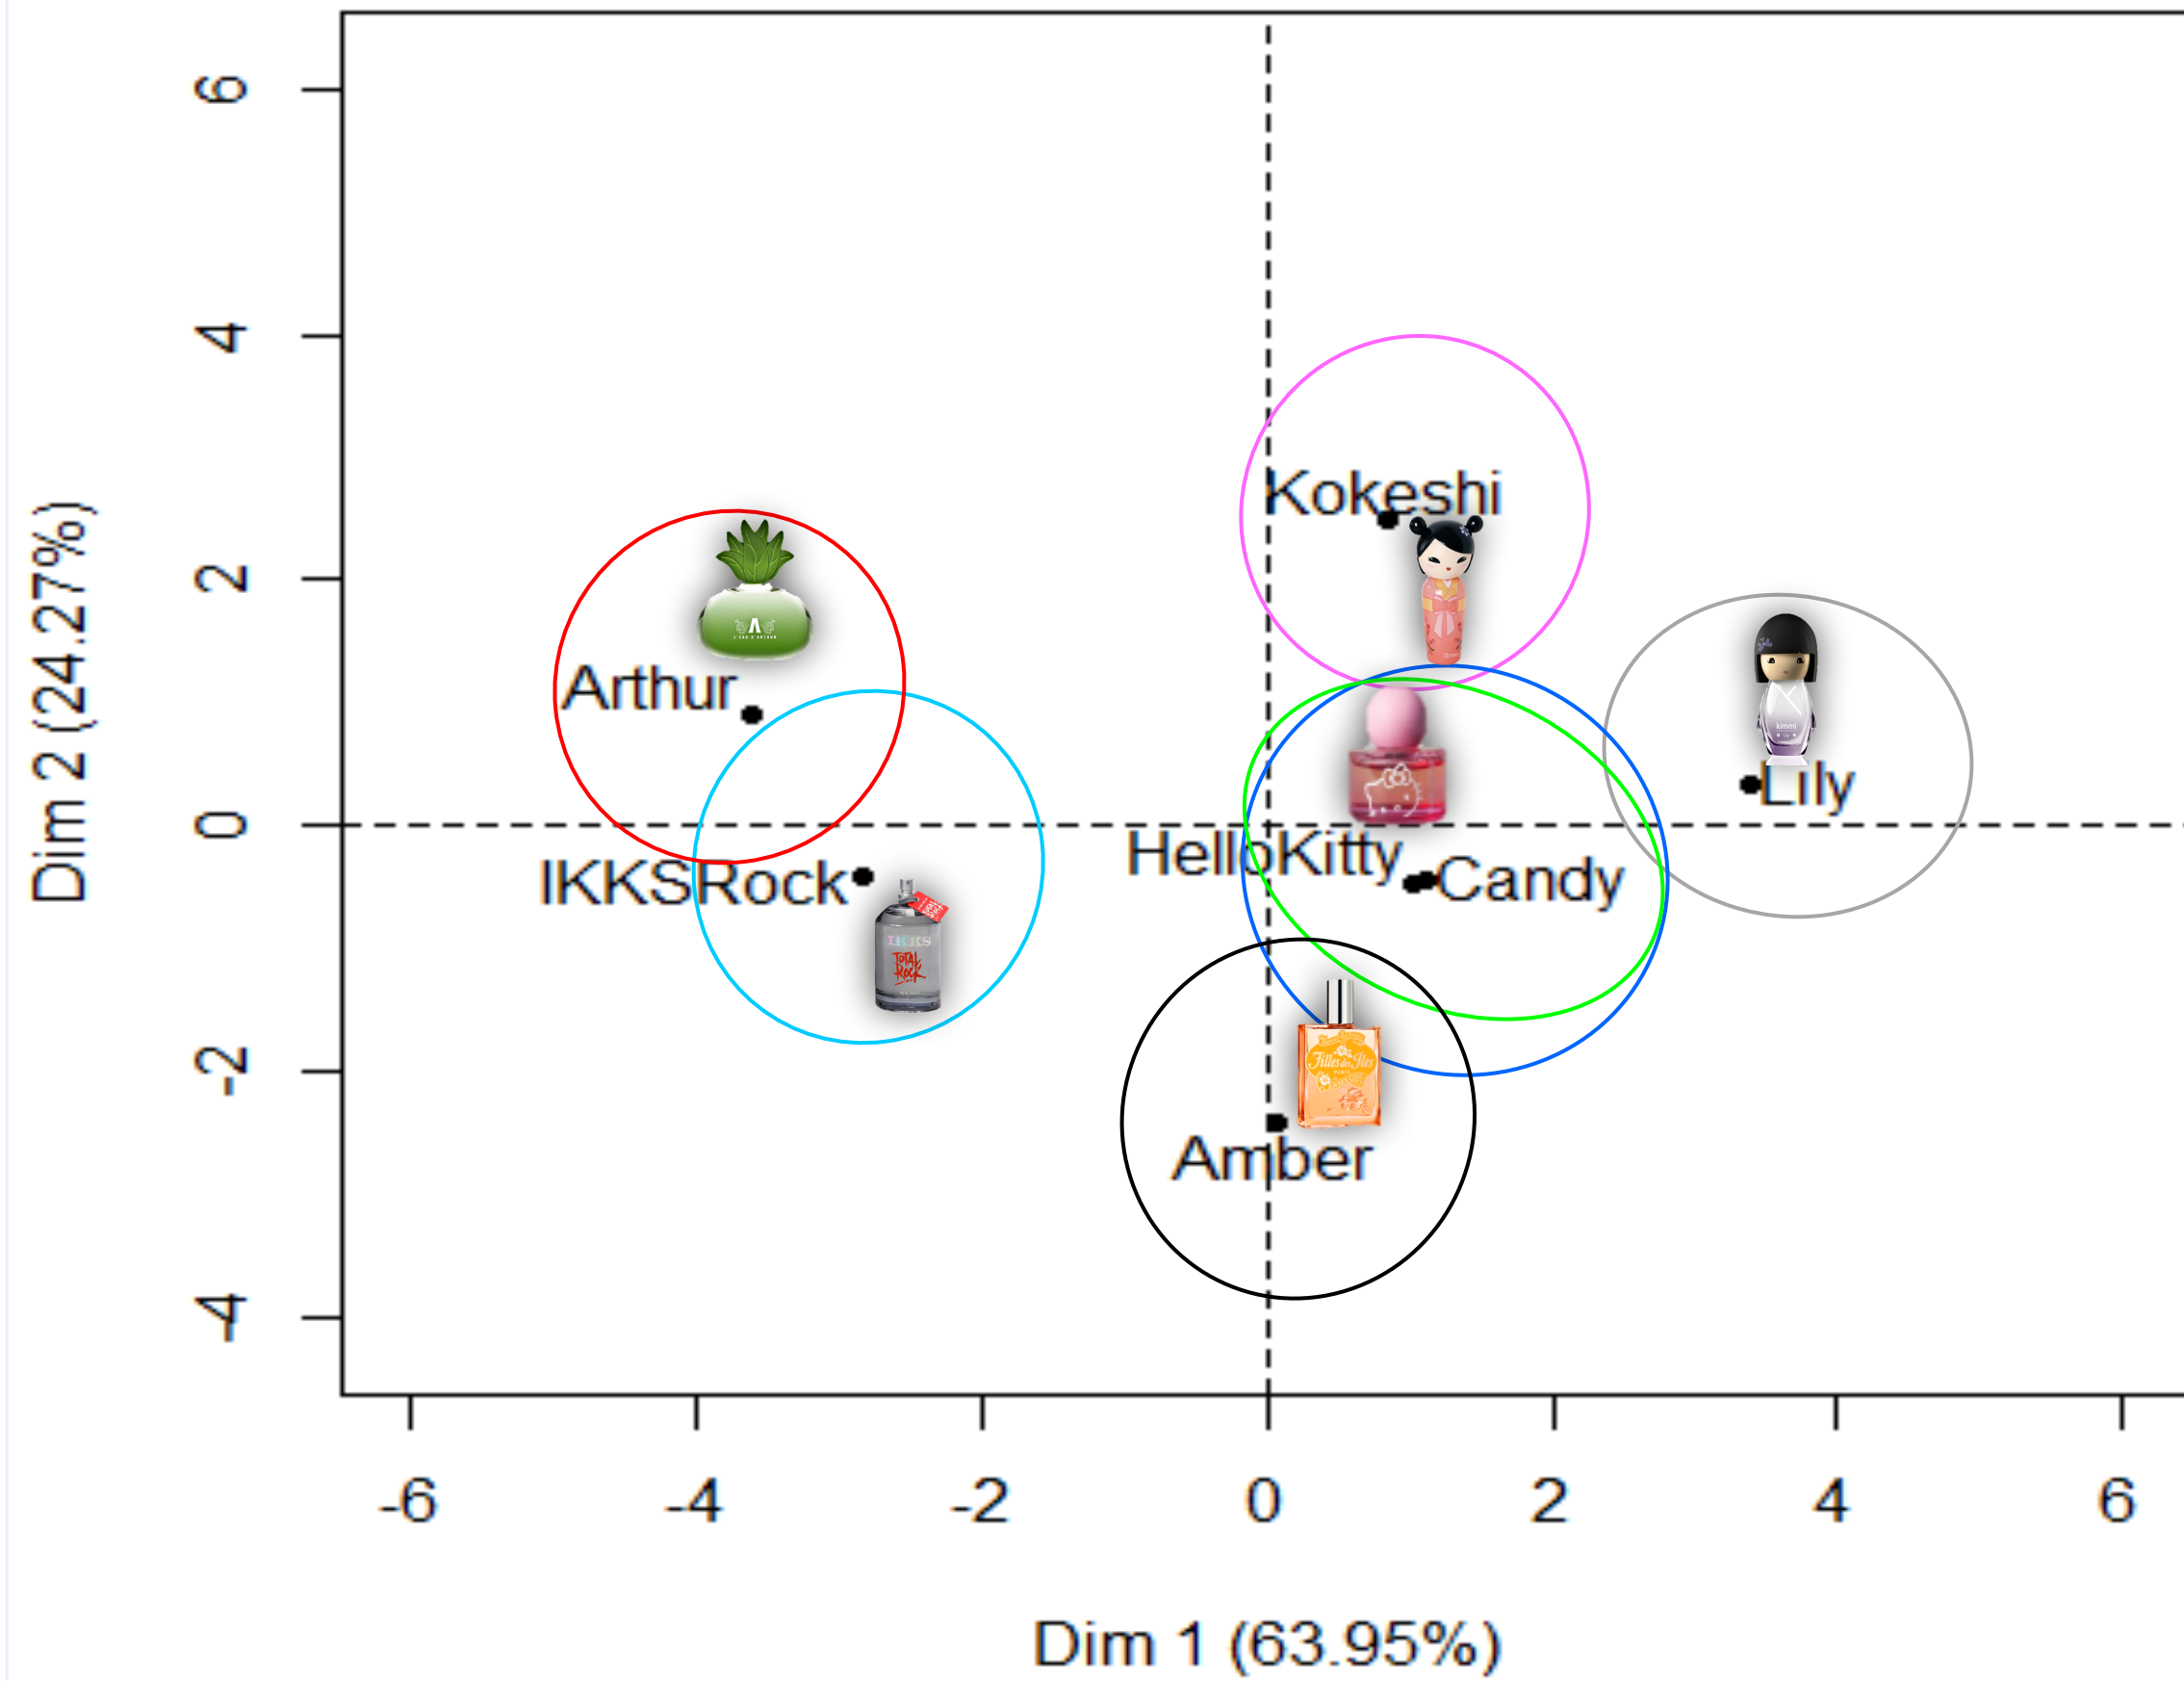

First step

Bootstrap / Resampling techniques

Sensory stability

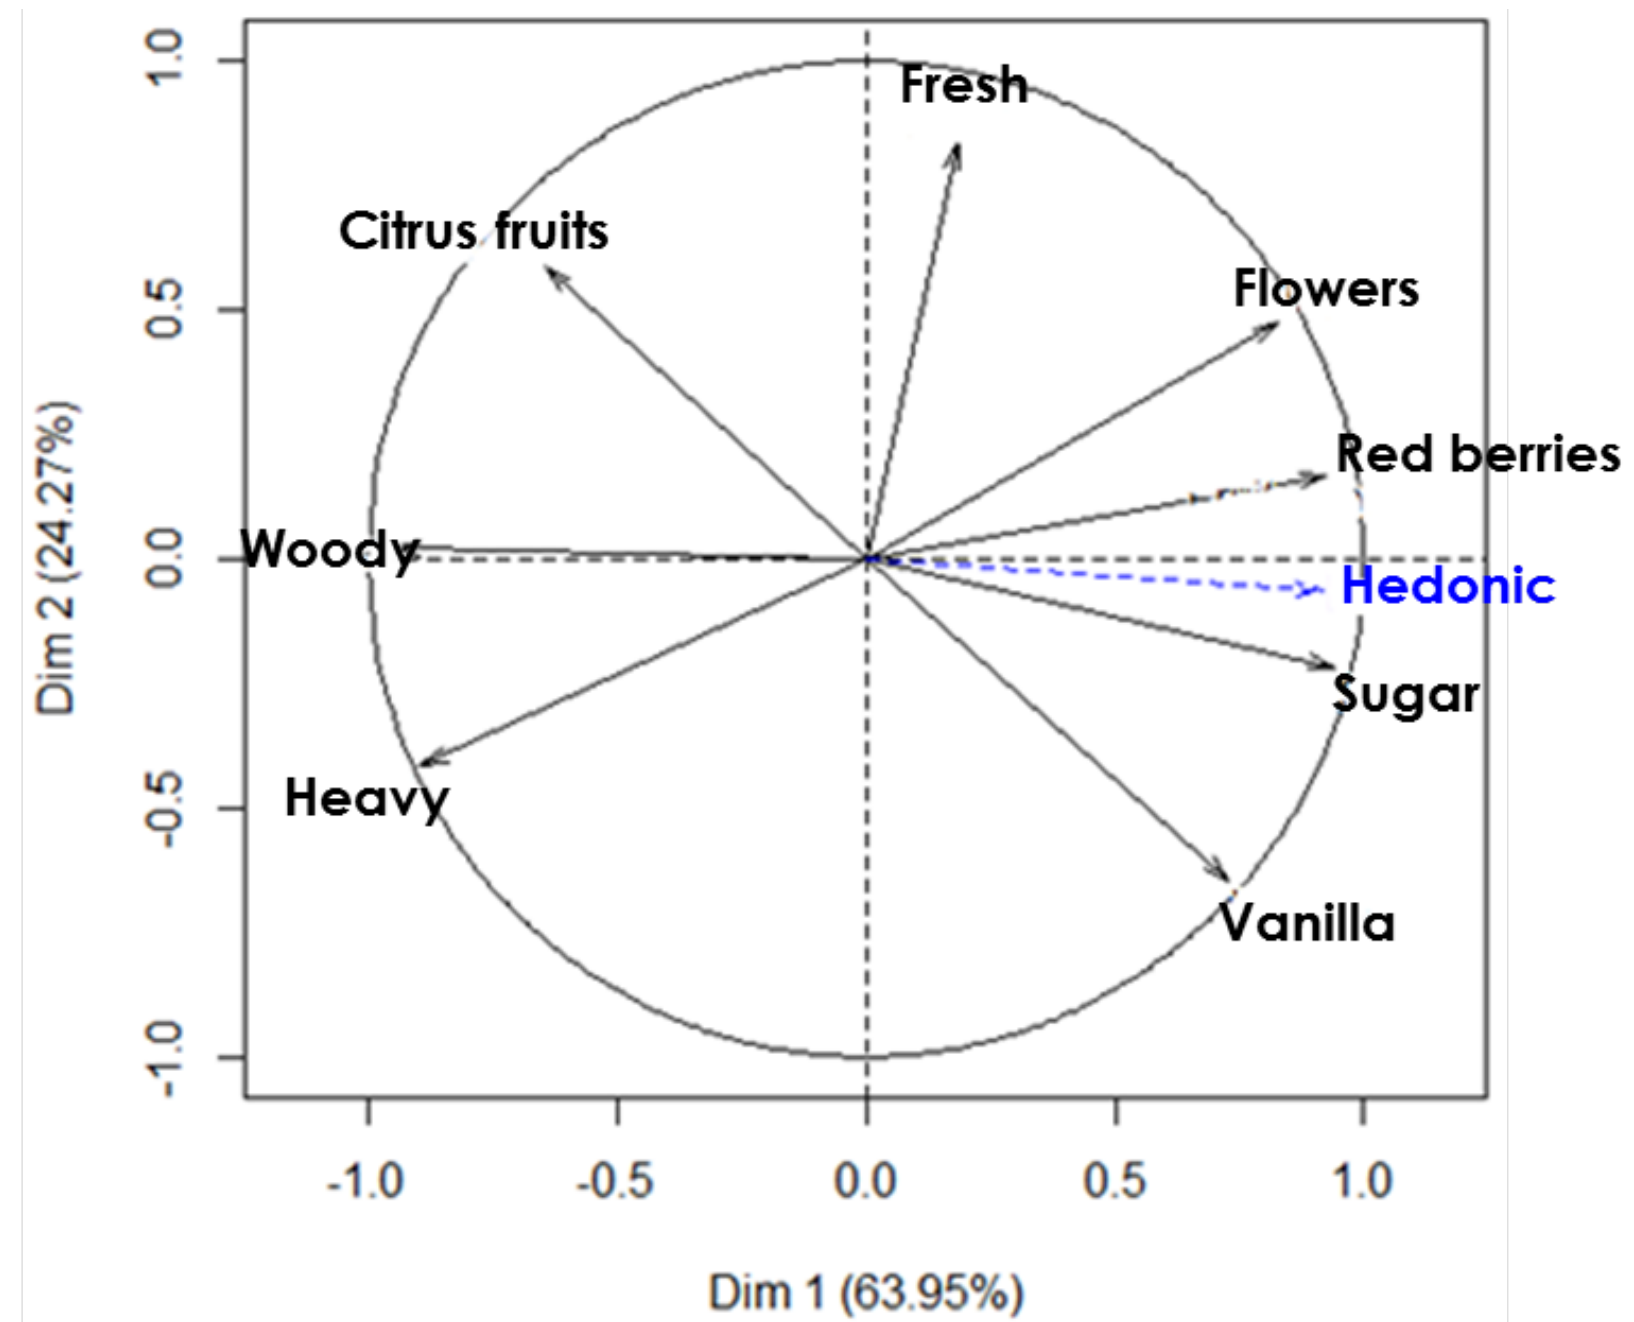

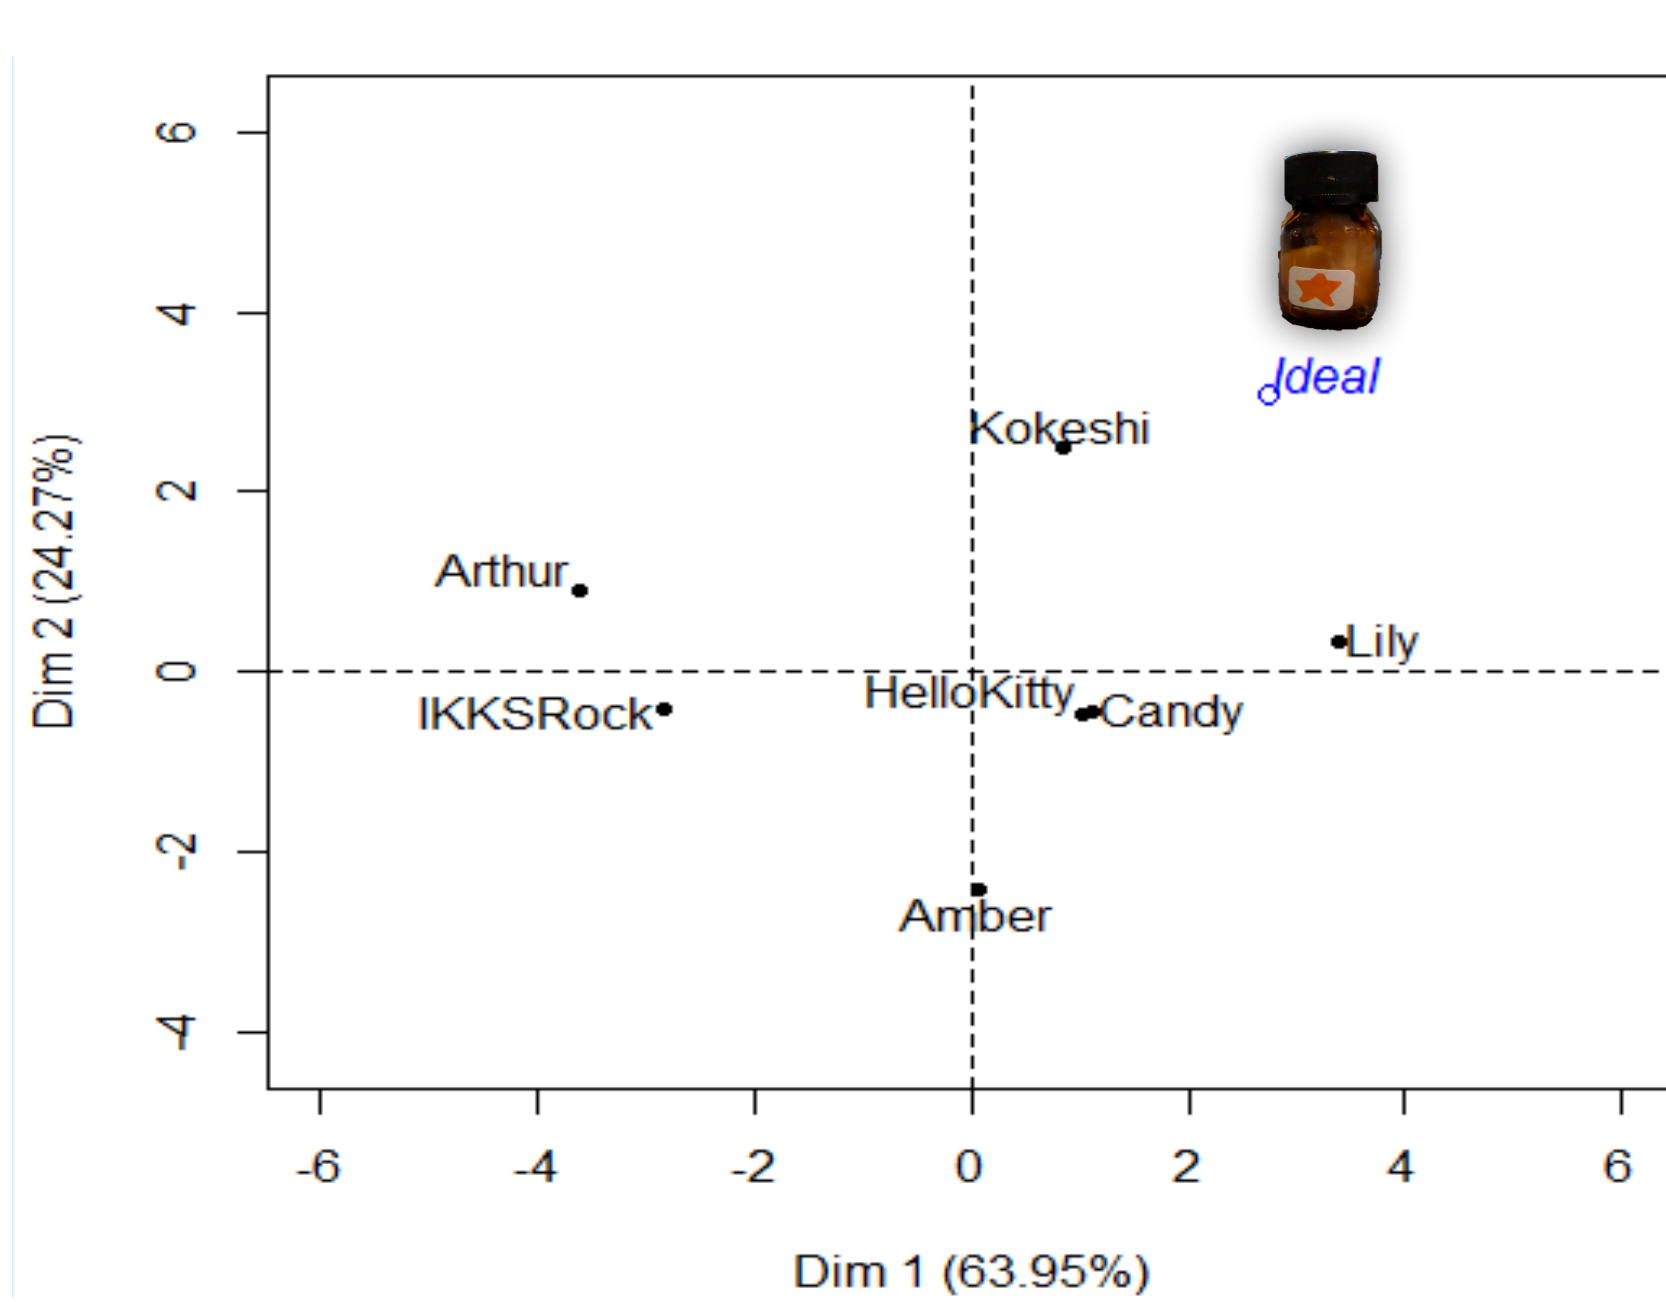

Second step

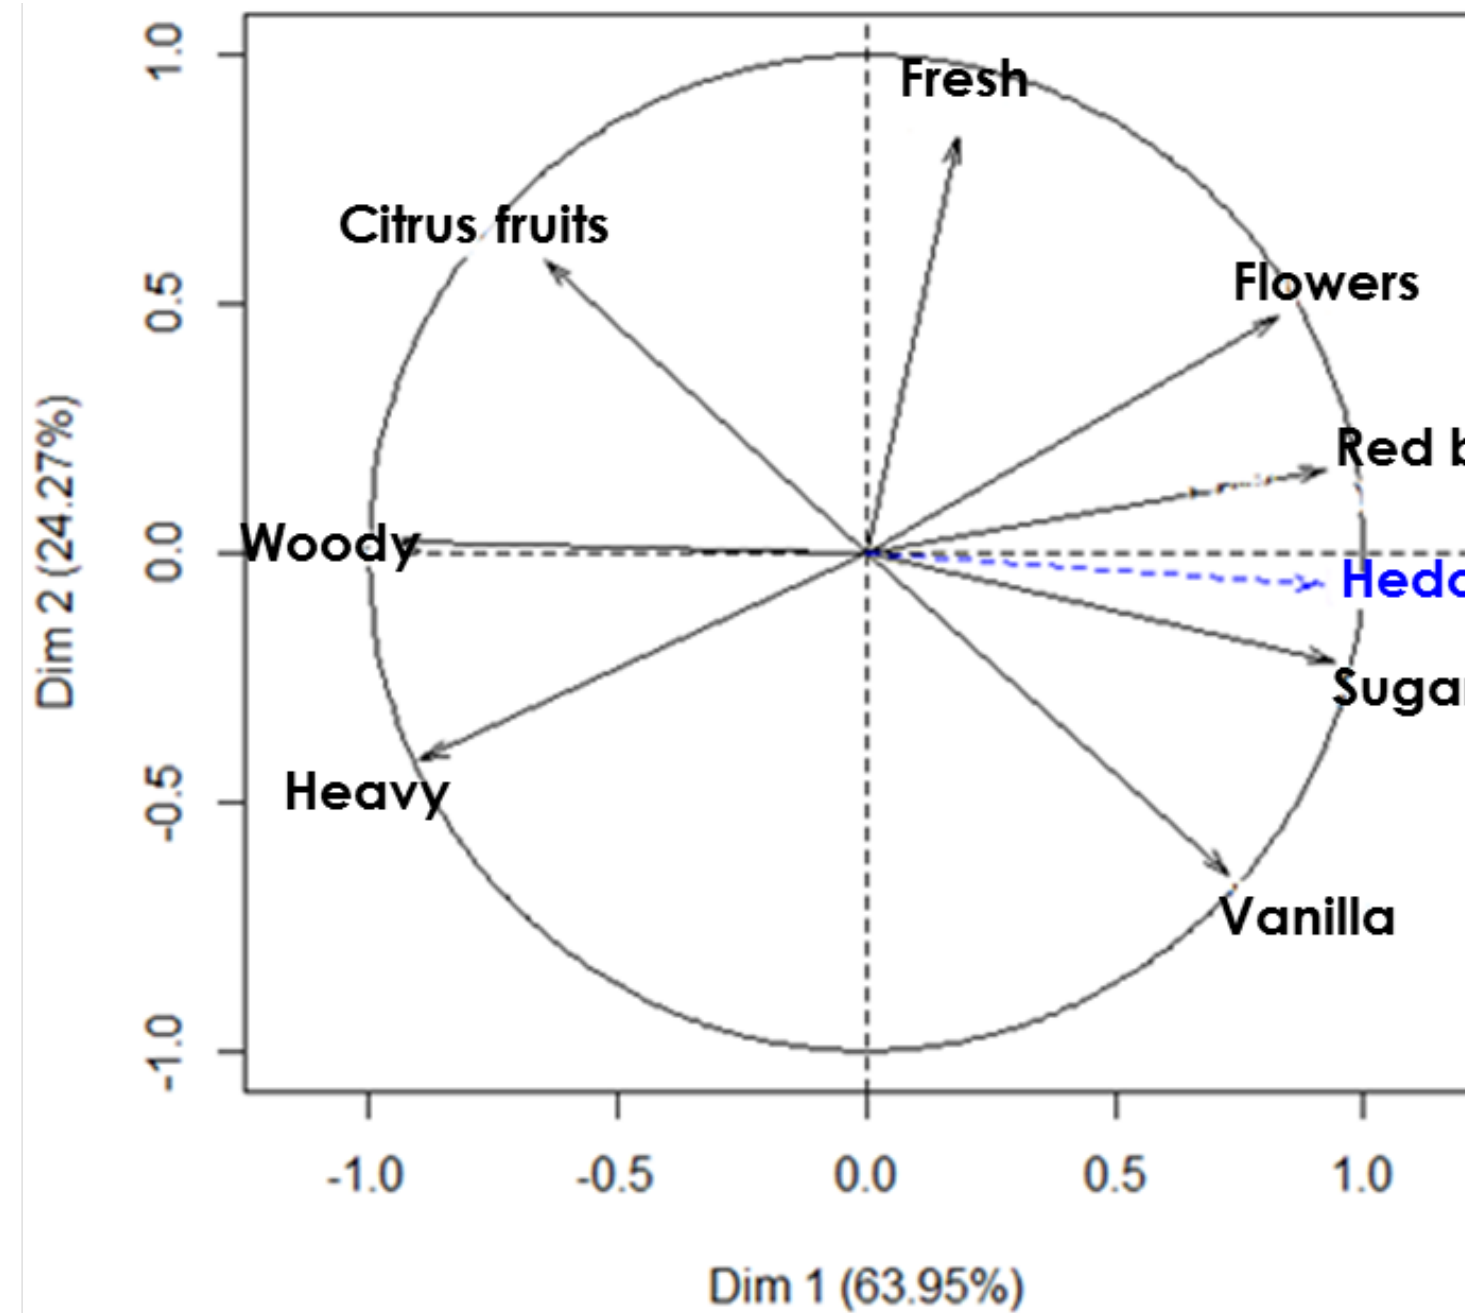

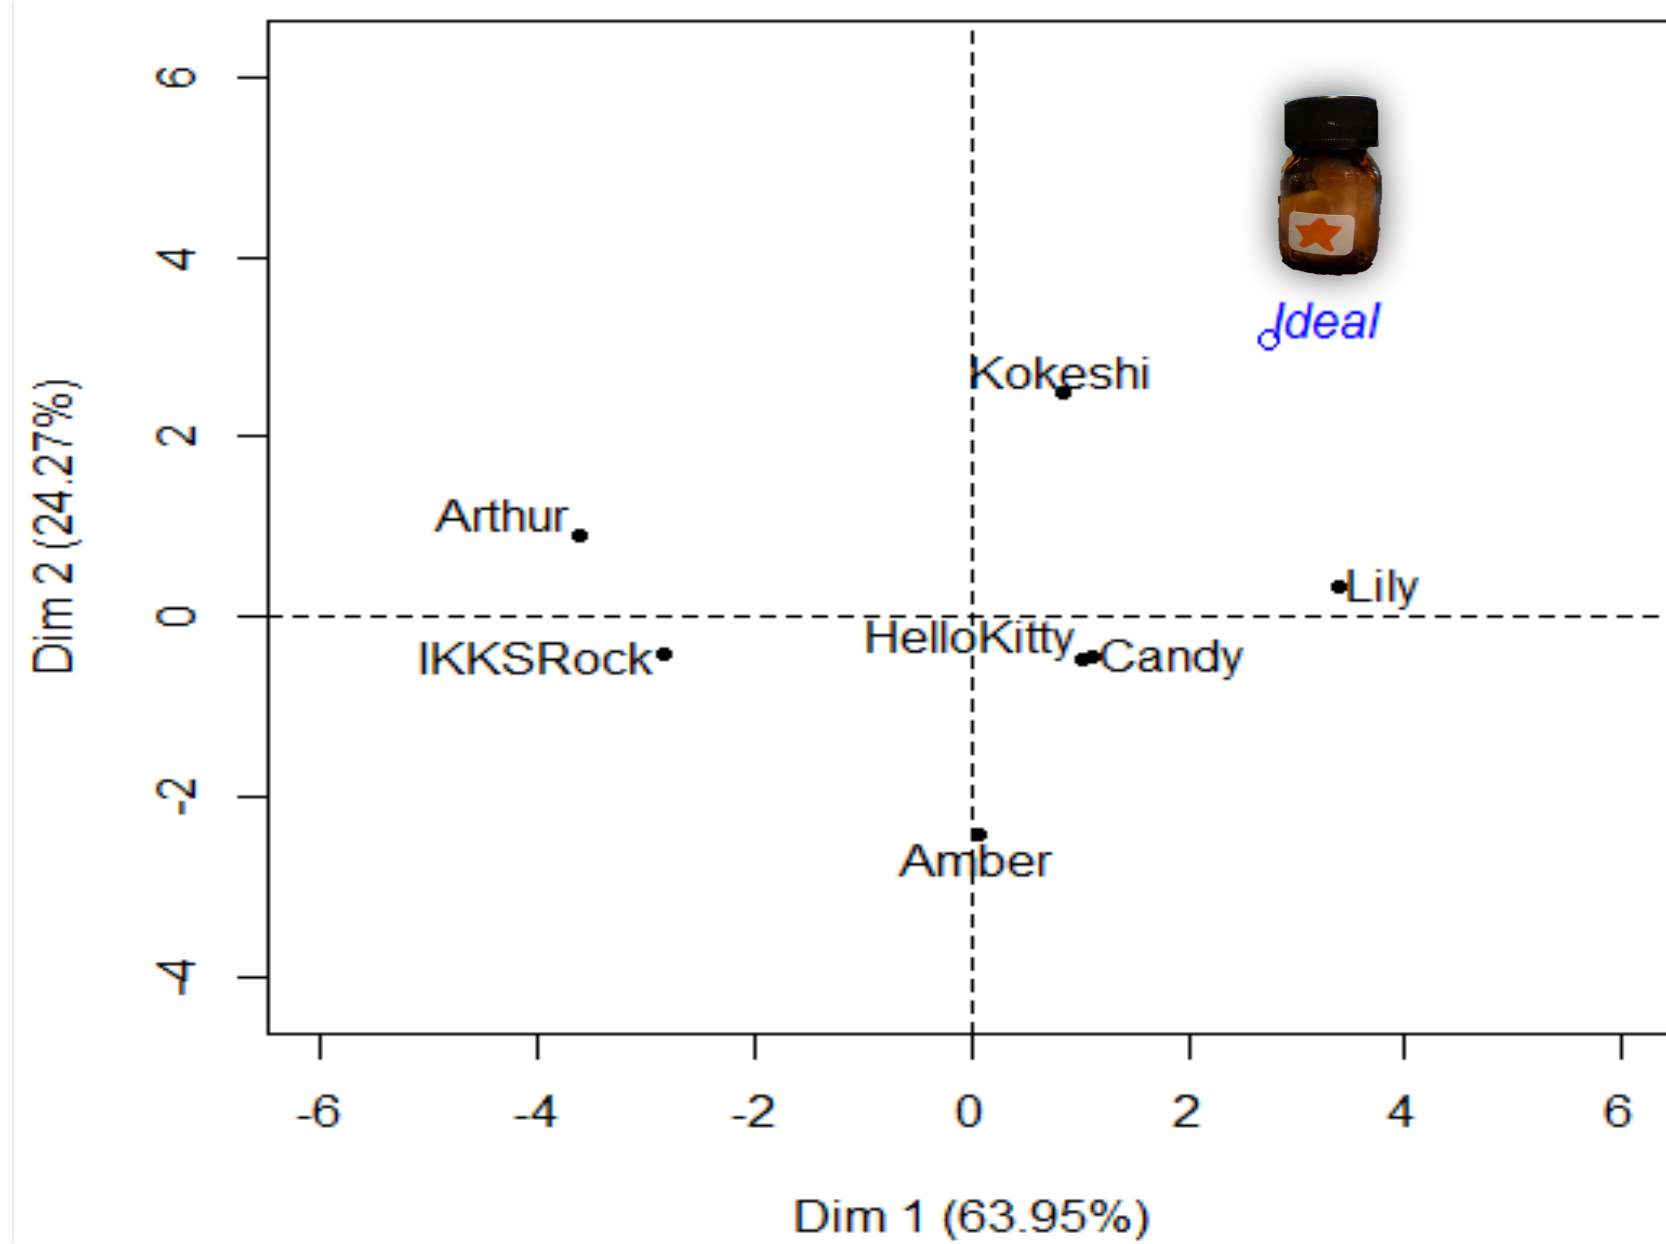

Sensory consistency

- The ideal data provided by a consumer are “sensory” consistent if the sensory profile associated to this ideal has similar sensory characteristics as the most appreciated product.
- From an attribute point of view, this means that consumer who said they have a higher appreciation for the products perceived as sweeter should also rate their ideals as rather sweet.
- We need to investigate whether the ideal is making the link between the sensory and the hedonic.

Sensory consistency

Sensory consistency

| | Descriptor |
|---|---------------|
| 1 | Vanilla |
| 2 | Sugar |
| 2 | Flowers |
| 4 | Red berries |
| 5 | Fresh |
| 6 | Citrus fruits |
| 7 | Woody |
| 8 | Heavy |

Rankings of the characteristics the most associated with the ideal product

Conclusion

- Beyond the versatility of the Bradley-Terry model in terms of usage, the key lesson for me would be the use of gamification to get data from children.
- This gamification can be seen as a **nudge**, in the true sense of the word.

Conclusion

- The **future** of sensory and consumer science?
 - A lot of common sense
 - Some behavioral economics
 - A pinch of statistics which is as salt, the spice of life: essential if not overused!
- « Free JAR, **nudging** your consumers for relevant data: an application to product development », **Alexiane Luc** et al. (to appear in FQP)
- « From Free JAR to sentiment analysis », **Alexiane Luc** et al. **Poster P1_140**
